Fic. No. $\qquad$

## Statistics Part-II Paper-I

## SECTION "A"

Time: 20 Min
Marks: 15
NOTE:Use this sheet for this section. No marks will be awarded for cutting, erasing or overwriting.
Q1.Choose the correct answer from the given choices i.e. ( $a, b, c, d$ ) and insert into the relevant box.
(i). If regression co-efficients are positive, then correlation co-efficient must be $\qquad$
$\square$
(A) Positive
(B).Negative
(C). Zero
(D) +1

(ii) Area to the right of $\mathrm{z}=0$ is $\qquad$
(a) +1
(b) 0.5 (c) -1
(d) -0.5
(iii). Possible samples of size 2 with replacement form a population of size 5 are $\qquad$

(a) 2
(b) 5
(c) 25
(d) 10
(iv). Critical region will be taken in the right tail if $\qquad$

(a). $\mathrm{H}_{1} \quad \theta \neq \theta_{0}$
(b) $\mathrm{H}_{0}: \theta=\theta_{0}$
(c) $\mathrm{H}_{0} \quad \theta \geq \theta_{0}$
(d). $\mathrm{H}_{1}: \theta>\theta_{0}$
(v). Mean of a normal distribution is 16 , then median will be $\qquad$
$\square$
(a) 2
(b) 4
(c) 8
(d) 16
(vi). Formula used to find unknown population Parameter is called $\qquad$
(a) Estimation
(b) Estimate
(c) Estimator
(d) None of these
(vii). Statistical inference has $\qquad$ branches. $\square$
(a) 4
(b) 2
(c) 3
(d) None of these
(viii). In contingency table if observed and expected frequencies are equal, then chi-square will be $\qquad$
(a) Zero
(b) Negative
(c) +1
(d) -1

(ix). The rank correlation co-efficient is used to measure the relation ship between two $\qquad$ variables.
(a) Qualitative
(b) Quantitative
(c) Discrete
(d) None of these
(x). The odd order moments about mean of a normal distribution will always be $\qquad$

(a) Positive
(b) Zero
(c) Negative
(d) None of thes
(xi). In regression analysis, the variable which is being predicted is called $\qquad$ variable.
(a) Continuous
(b) Independent
(c) Dependent
(d) None of these
(xii). Rejecting a true null hypothesis is called $\qquad$ error.

(a) Standard
(b) Sampling
(c) Type-II
(d) Type-I
(xiii). As the sample size increases, the standard error of the mean $\qquad$ .
(a)Increases
(b) Decreases
(c) Unchanged
(d) None of these
(xiv). Seasonal variations are $\qquad$ changes.
(a) Long term
(b)Short term
(c) Unsystematic
(d) None of these
(xv). methods are available for computing secular trend.

$\qquad$
(b) Three
(c) Four
(d) Five
(a) Two

# Statistics Part-II <br> Paper-I 

## SECTION "B"

Marks: 36

## Q2. Attempt any NINE questions. Each question carries 4 marks.

(i) Distinguish between regression and correlation .
(ii) Using property $r=\sqrt{b x y \times b y x}$. If $\mathrm{r}=0.56$ and $\mathrm{bxy}=0.65$ find byx.
(iii) Differentiate between probability and non-probability sampling.
(iv) Explain what is unbiased estimator?
(v) In sampling with replacement, if $\mathrm{P}=0.45, \mathrm{n}=36$. Find $\mu \hat{p}$ and $\delta^{2} \hat{p}$.
(vi) What are acceptance and rejection regions?
(vii) Write down the properties of sampling distribution of $\left(\bar{x}-\overline{x_{2}}\right)$
(viii) Explain what is statistical inference?
(ix) Calculate chi-square from the following $2 \times 2$ contingency table.

|  | $\mathrm{A}_{1}$ | $\mathrm{~A}_{2}$ |
| :---: | :---: | :---: |
| $\mathrm{~B}_{1}$ | $\underline{70}$ | $\underline{30}$ |
| $\mathrm{~B}_{2}$ | $\underline{25}$ | $\underline{105}$ |

(x) Explain the terms test statistic, simple hypothesis and type-I error.
(xi) In normal distribution if $\delta=25$. Find mean deviation.
(xii) If $\mathrm{n}_{1}=\mathrm{n}_{2}=64, \overline{\mathrm{x}}=2.9, \overline{\mathrm{x}}_{2}=5.1, \stackrel{2}{\mathrm{~s}_{1}}=0.83 \stackrel{\mathrm{~s}}{2}_{2}^{2}=0.83$. Construct $95 \%$ confidence interval for $\mu_{1}-\mu_{2}$.
(xiii) Explain what is simple Random sampling?

## SECTION "C"

Marks: 24
Note: Attempt any THREE questions. Each question carries 10 marks.
Q3. (a)Fit regression line of yon x from the following.

| $\mathbf{X}$ | 30 | 25 | 65 | 50 |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{Y}$ | 15 | 28 | 30 | 22 |

(b) If X is normal random variable with mean 50 and S.D 11. Find $\mathrm{P}(\mathrm{x} \geq 50), \mathrm{P}(45 \leq \mathrm{x} \leq 45)$

Q4. (a) Given $\mathrm{n}_{1}=144$
$\overline{\mathrm{x}}_{1}=6.5$
$\mathrm{s}_{1}=4$
$\mathrm{n}_{2}=100 \quad \overline{\mathrm{x}}_{2}=6 \quad \mathrm{~s}_{2}^{2}=2$
Test $\quad \mathrm{H}_{0}: \quad \mu_{1}-\mu_{2}$. at $\quad \alpha=0.05$
(b) Complete trend valves by semi-Average method.

| Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sale | 120 | 124 | 122 | 130 | 128 | 132 |

Q5. Find spearmen's Rank correlation co-efficient from the following.

| $\mathbf{Y}$ | 23 | 36 | 24 | 25 | 33 | 36 | 40 | 25 | 27 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathbf{X}$ | 48 | 52 | 35 | 30 | 48 | 51 | 42 | 30 | 48 |

Q6. Let Z be a standard Normal random variable. Find the following.
i. Area to the right of 2.63
iii. Area between 2.27 and 3.02
ii. Area to the lift of -1.45
iv. Area between -2.65 and 2.09
