INTRODUCTION TO THE WORKSHOP

Centre for Plant Conservation is organizing a workshop on Pollen techniques for the first time. The term palynology is derived from the Greek word "palynein" meaning "to spread" and "pollen" in Greek language means "fine flour", thus recognizing the fact that various pollen and spores are carried and spread by the air. Palynology is a diverse branch of biological sciences that is unique and interesting in many different ways. It is the study of pollen and spores. It mainly includes the morphological characterization of pollen grains along with the application of other aspects of pollen studies.

This workshop will provide an opportunity to understand palynological techniques in detail. This will also provide a platform to the participants to interact with experts in Plant Taxonomy and Palynology.

WORKSHOP OBJECTIVES

- ❖ Introduction to Palynology
- ❖ Advancements in Palynology
- ❖ Techniques in Palynology
- ❖ Introduction to Light Microscopy and Scanning Electron Microscopy
- ❖ Pollen slides preparation and mounting

WHO SHOULD ATTEND

Students
Researchers
